March 1, 2012

[REDACTED]
Indianapolis, IN 46222

Dear [REDACTED]:

I am writing to share the results of the sample the U.S. Environmental Protection Agency collected at your property at [REDACTED] on December 12, 2011, to see if your drinking water well has been contaminated with vinyl chloride or other volatile organic compounds (VOC). The sample was collected before it entered the treatment system.

Vinyl chloride was detected at a concentration of 4.8 micrograms per liter (ug/L). This result is above what EPA considers to be safe for drinking water. You should continue to use treated water and regularly maintain the treatment system. The laboratory report is attached to this letter.

If you have questions, please feel free to contact me at 317-417-0980.

Sincerely,

Shelly Lam, LPG
Federal On-Scene Coordinator
